

Electronic Meal Ordering

Electronic food ordering systems allow nutrition to become an integral part of overall care.

**£262,900
SAVING**

Patient nutrition is a significant contributor to patient well-being, speed of recovery and length of hospital stay. Improving patient diet and reducing food waste are key goals of hospital catering departments. For Nurses, Electronic Meal Ordering means less time filling in paperwork and more time on the ward with patients. For an average Trust, the savings break down is as follows:

£

Total paper removal cost saving per annum = £27,375

£

Total efficiency cost saving per annum = £40,359

£

Total wastage reduction saving cost per annum = £72,270

£

Total reduced length of stay cost saving per annum = £122,896
